EXTRA SERVICE MICRO-V® XF

GREEN GOLD

Heavy-duty engines are not like regular engines, and neither are their needs. High power transmissions, increased tensions and speeds and tough working environments make them a belt's worst enemies. And since unexpected breakdowns cause a considerable loss of time and money, the importance of a belt that lives up to heavy-duty requirements is obvious.

As a leading manufacturer of original equipment as well as replacement products for both passenger cars and heavy-duty vehicles, Gates knows heavy-duty belts better than anyone. That's why we recently extended our range of specific heavy-duty products with a revolutionary new belt that is designed to last even longer. Extra Service Micro-V® XF is the toughest belt there is. It's pure, green gold.

Designed to last

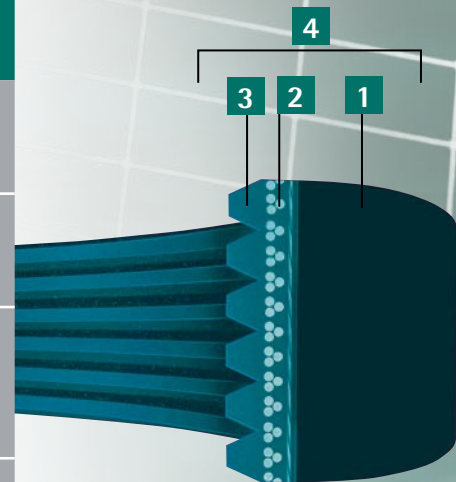

Extra Service Micro-V® XF is not like any other belt. It is better. Much better.

Built to original equipment quality standards and engineered specifically for fleets and heavy-duty applications in trucks, buses and tractors, Extra Service Micro-V® XF lives up to the most demanding requirements of today's most severe applications.

Extensive testing has shown that it lasts up to twice as long as standard multi-ribbed belts. Extra Service Micro-V® XF consistently outperforms all competitors in terms of wear and heat resistance, load capacity and flexibility.

Here's what makes green Extra Service Micro-V® XF belts unbeatable:

- 1 *Green back fabric* provides extremely high resistance to wear.
- 2 *Newly developed polyester tensile cords* guarantee low stretch and optimum load-carrying capacity at even the highest tensions.
- 3 *Aramid fibre-reinforced EPDM belt ribs* offer optimum resistance to the highest and lowest temperatures. They are also extremely resistant to pilling, oil drops and UV exposure.
- 4 *Low belt profile* increases flex life, thus ensuring higher mileage and trouble-free performance.

**Even under the toughest conditions,
Extra Service Micro-V® XF belt life
will double that of
standard serpentine belts.**

More complete coverage

The Gates Micro-V® XF range offers complete market coverage. The size-based numbering system makes it easy to determine the right belt for the application.

Number of ribs 8	Section of the ribs PK	Effective length in mm 1375	Extra Service ES
----------------------------	----------------------------------	---------------------------------------	----------------------------

Green gold

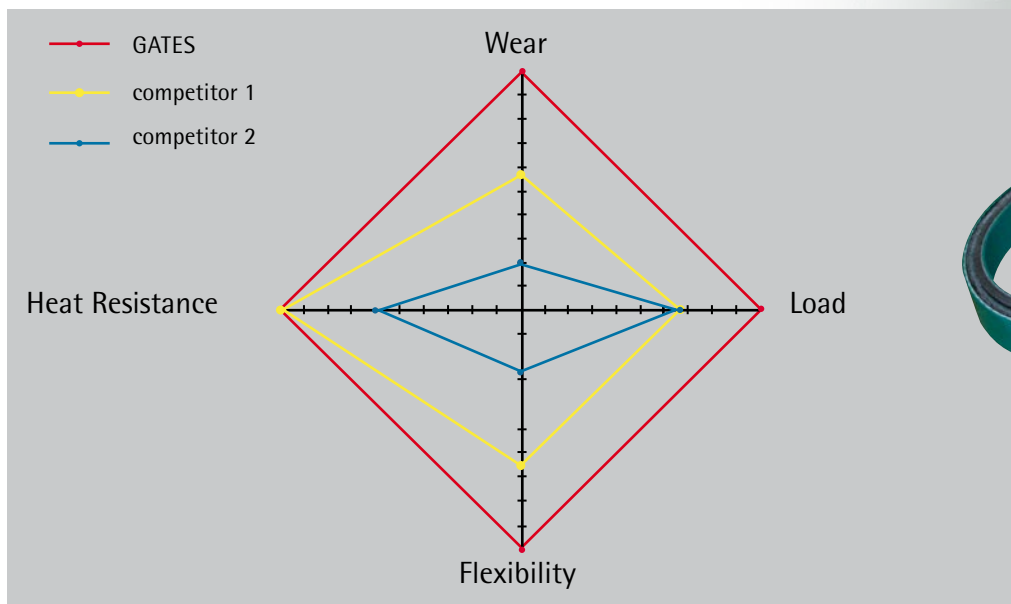

This belt will change your entire outlook on belt performance, help you prevent downtime therefore saving a lot of money on maintenance.

Don't settle for anything less than the new, green belt, part of a whole line of rugged, heavy-duty Extra Service products from Gates.

Gates Extra Service: a complete range for heavy-duty applications

Gates knows belts better than anyone. We provide a broad range of specific heavy-duty products, specially designed for trouble-free and long-lasting

service. Specialist and sales support and up-to-date application information complete Gates' heavy-duty program.
